RightFind® Business Intelligence Executive Dashboards

Organize and share the data most valuable to you and your colleagues.

RightFind® Business Intelligence is the content usage, spend, and value analytics module for RightFind® Enterprise. It is the only solution to combine analytical tools for insights on content usage and spending, with budget tools to help you showcase the strategic value of the information center.

Within RightFind Business Intelligence, you can easily organize data by creating Executive Dashboards. These customizable dashboards feature the data visualizations of your choice, and can be used to provide insights to stakeholders on the value of your organization’s content portfolio.
EXECUTIVE DASHBOARDS IN ACTION

**Compile the Data Most Important to You**
Save time by easily accessing the information you look for most often. After selecting the data points you’d like to appear in a dashboard, like spend by publisher or top journals, you can configure them by chart type, business unit and date range.

**Collaborate with Users**
Dashboards can be private or shared with fellow RightFind Business Intelligence users. When other users have access to a dashboard, they can flag and comment on different areas of the dashboard, allowing for a collaborative space to review data.

**Focus on Certain Types of Analysis**
Create dashboards that allow you to focus on data from several different angles to help tell your content ROI story. For example, reports can be created by geography, by department, or by document delivery, subscription, or token analysis.

**Share with Stakeholders**
Ensure the right people are seeing information center data by enabling automatic emails. You’ll have the option of sending out a custom dashboard weekly, monthly or quarterly to non-RightFind users.
