In particular, companies that were founded in academic institutions can struggle to provide content access that is organized, comprehensive, and copyright-aware. Through its development the past 20 years, Genmab addressed its critical information needs with tools that allowed researchers to get the information they needed, when they needed it, all while remaining copyright-compliant, recalls Project Management Office Director Frank Rebers.

Challenges for a developing company

At Genmab, many staff research scientists arrived directly from academia where vast university libraries offered seemingly unlimited access to information. Private companies may not have that opportunity and must operate differently when it comes to information access, Rebers notes.

“The most important challenge is actually the copyright awareness,” he explains. “These scientists are used to having access to all information, especially if they worked in nonprofit groups. The challenge that we have is that scientists, and maybe people in general, think that what we can download from the Internet is available to [use without limitation]. Obviously, that is not the case.”

Because Genmab takes great care to protect its own intellectual property, in extension, the biotechnology company also recognizes the need to protect the intellectual property of others.
One of Genmab’s core values is in fact integrity, Rebers notes. Since doing the right thing is a key component to the company’s mission, they work hard to respect copyright.

Copyright compliance was not the only challenge for the biotechnology company; Genmab also needed to subscribe to the proper journals and create a way for the researchers to easily access and use the articles found in those journals. More than half the staff at Genmab hold advanced degrees, and the research they perform demands specialized information. Without immediate access, delays in drug development can occur, impacting Genmab’s core purpose to improve the lives of patients by creating and developing innovative antibody products.

The solution

Genmab decided to secure RightsDirect’s Multinational Copyright License, as well as implement the RightFind solution, which delivers need-to-know STM content quickly, displays available usage rights, and analyzes content spend.

With RightFind, researchers can verify in seconds if their organization has a subscription to a journal and where they can find the content. In addition, RightFind indicates available permissions for each article, allowing researchers to concentrate on developing drugs.

As a combined solution, the Multinational Copyright License and RightFind work together to let researchers share information with team members, store articles for later use, provide required information to regulatory officials, and make it easy for Genmab’s researchers to remain compliant, so they can concentrate on saving lives.

The Multinational Copyright License and RightFind

The Multinational Copyright License simplifies content sharing, storing and copyright compliance across borders. This license provides a set of additional rights that go well beyond what’s covered in most subscriptions for millions of titles from over 12,000 publishers worldwide. Licensees benefit from a consistent set of usage rights across participating rightsholders, simplify copyright compliance, and share published content across borders with one license.

With RightFind, employees get fast, easy access to the high-value copyrighted information they need in a single platform. RightFind enables researchers to quickly obtain and share published information from internal collections, company subscriptions, Open Access sources and document delivery — all while managing copyright compliance.

About CCC

A pioneer in voluntary collective licensing, Copyright Clearance Center (CCC) helps organizations integrate, access, and share information through licensing, content, software, and professional services. With expertise in copyright and information management, CCC and its subsidiary RightsDirect collaborate with stakeholders to design and deliver innovative information solutions that power decision-making by helping people integrate and navigate data sources and content assets.
