2023 Information Seeking and Consumption Report

For professionals in Law Firms, using content is essential for collaboration and greatly influences business development and communications, patent creation and defense, and litigation outcomes. Given the constant pressure around performance and results, the behaviors and attitudes of professionals in Law Firms around content use and sharing requires attention as they seek to establish a competitive edge in an ever-changing landscape. For many, the transition to hybrid and remote work has created new dynamics for information sharing including how employees engage and collaborate with published content. The Information Seeking and Consumption Study by Outsell, Inc. focused on insights into how people think and behave in the context of copyrighted content consumption, use, and sharing, both within and outside the walls of their organizations, and the impact of remote working. Here’s what we learned:

Importance of Content
Professionals in Law Firms consider 9.8 different print or digital publications critical to their job function.

Types of externally published content used at work

The Velocity of Content is Shifting
The velocity of content is the measure of how quickly externally published information flows inside and outside of an organization. Using data points from the Outsell survey, it is calculated by multiplying the frequency of sharing, the number of people with whom information is shared, and the percentage of information that comes from external sources. In Law Firms, respondents report sharing work-related content 11.9 times per week with 17 other people. Considering that 48% of content is sourced from external providers such as scholarly journals, news sources, and other publications, there is potential for more than 126.5 instances of unlicensed sharing per employee per week if proper permissions are not in place.
Copyright Awareness and Attitudes

Companies are sharing their copyright policy more frequently, but employees are still sharing published content. **88% of employees claim to be aware of their company’s copyright policy.** However, according to Outsell’s newest research, employee attitudes and behaviors don’t always align with policy awareness.

- **52%** don’t strongly agree that copyright infringement has serious risks and implications.
- **76%** believe that sharing is permitted if the information is obtained on the open web or in print.
- **69%** feel that the issue of getting permission creates obstacles to sharing information.
- **85%** will forward any and all information in a competitive situation.

Why It Matters?

While the sharing of information with co-workers supports collaboration and drives innovation, the sharing of published information without obtaining the necessary subscriptions, licenses or permissions also carries enormous potential risk. Ordinary content exchanges that come so naturally in the digital world can increase the risk of copyright infringement, trigger costly lawsuits or settlements, and result in damage to brand reputation.

By taking steps to balance employee reuse of published content with a strong compliance and licensing program, your company can leverage today’s rise in content sharing to help support collaboration and drive innovation.
