ESAC Article List Report: Now Available On Demand in Institutional Portal

The ESAC Article List Report has been available as a scheduled report by contacting publishers since June 2023. With the October 2025 release, institutional users will now be able to run the report on demand from the Institutional Portal. Institutions will have several options when generating this report, including:

- Querying for transactions covered by a single special billing profile or all of their special billing profiles.
- Querying for transactions covered in the Current Month, Current Quarter, Previous Month, Previous Quarter, Year-to-Date, or a Custom Date Range. The selected date range will identify transactions to include using the 'Relevant Date for Agreement' Column in the report.

In addition, the report will be updated to include the Article Publication Date if provided in the article metadata. Currently, the date populated in the report is the Target OA Publication Date. This will be replaced by the actual publication date when available.
